

UDS 2022 in Greenway Insights

Donnell Gonzales, Product Manager

Reporting UDS for 2022

The UDS dashboard in IPA uses logic from the 2021 Reporting Year. It has not been updated to 2022 specifications.

HRSA did not make logic changes to some measures for the 2022 reporting year. Since the logic for these measures has not changed, the logic for the 2021 reporting year can be used for accurate 2022 reporting.

- The 2021 reporting logic is the same as the current reporting logic for UDS-4, UDS-5, and UDS-ZIP. *You can use either IPA or Greenway Insights for these measures.*
- UDS- 9D is only available in IPA for 2022 reporting. *Greenway Health recommends that you use IPA for UDS-9D when preparing your UDS 2022 report.*
- Greenway Health recommends that you use Greenway Insights when preparing all other UDS measures for your UDS 2022 report.

Reporting UDS for 2022

- Note that Greenway Insights does not include deactivated patients in its results.
- Patients whose accounts have been deactivated, but who had a least one visit during the UDS reporting period, will need to be examined and manually included in your UDS results when applicable.
- To get a list of deactivated patients, use the patient report in the Intergy Desktop.

Getting ready for UDS in Greenway Insights

- Clients can start using Greenway Insights today! Reach out to Support for help with enrolling
- In-product guides and help are published and updated frequently.
- Use MyGreenway to sign up for EAP via Greenway Champions, access the Regulatory Resource Hub for trainings and quick access to help documentation
- Join the 4-week UDS EAP for early access to your UDS dashboards in Greenway Insights! Sign-up via Greenway Champions
- Attend the Intergy Town Hall in November for more updates
